

## Atlantic Shark Commercial Fishery Update

Below are preliminary landings estimates in metric tons (mt) dressed weight (dw) for the Atlantic shark commercial fisheries for the 2<sup>nd</sup> season of 2004 (July through Dec). These landings estimates include landing reports received as of October 29, 2004. Any state landings and over/underharvests from this season will be totaled and counted against future quotas, as appropriate. Additionally, any unclassified landings are considered, at this time, to be large coastal sharks.
